

This folder contains the shapefiles for the April 2011 East Africa FEWS NET Food Security Outlook. The classification scale used is the [Integrated Phase Classification \(IPC\) V2.0 scale](#). The folder includes three shapefiles, representing the three periods of analysis:

EA_201104_CS	Current food security outcomes for April 2011
EA_201104_ML1	Most likely food security outcomes for April 2011 – June 2011
EA_201104_ML2	Most likely food security outcomes for July 2012 – September 2012

Within the shapefiles, the CS/ML1/ML2 fields contain the IPC area phase classification for the outlook period. FEWS NET began implementing the IPC humanitarian assistance mapping protocol (!) in April 2012. Thus, humanitarian assistance is not included in this data but was considered during analysis. The IPC\_Legend.lyr file is provided for reference. It contains the official IPC color scheme.
