

NOTE: In October 2018, FEWS NET did not produce medium-term projections (most likely food security outcomes for February – May 2019) for all FEWS NET presence countries in the region.

This folder contains the shapefiles for the October, 2018 East Africa FEWS NET Food Security Outlook. The classification scale used is the [Integrated Phase Classification \(IPC\) V2.0 scale](#). The folder includes three shapefiles, representing the three periods of analysis:

EA_201810_CS	Current food security outcomes for October 2018
EA_201810_ML1	Most likely food security outcomes for October 2018 – January 2019
EA_201810_ML2	Most likely food security outcomes for February 2019 – May 2019

Within the shapefiles, the CS/ML1/ML2 fields contain the IPC area phase classification for the outlook period. The Humanitarian Assistance column (HA0, HA1, or HA2) indicate if humanitarian assistance is helping to lower the phase classification. If the HA column = 1, then the phase classification would likely be at least one phase worse without current or programmed humanitarian assistance. In FEWS NET and IPC maps, this is represented by an exclamation mark (!).

The IPC\_Legend.lyr file is provided for reference. It contains the official IPC color scheme. An additional layer file with the IPC standard symbology (!) for humanitarian assistance is also provided.

For additional details on our food security data please click [here](#). Food security data for other regions and dates is available [here](#).
