

This folder contains the shapefiles for the January 2011 Southern Africa FEWS NET Food Security Outlook. The classification scale used is the FEWS NET Food Insecurity Severity Scale (FNFIS). The FNFIS was used by FEWS NET prior to April 2011. This scale was similar to the IPC but with some differences in classification criteria.

The folder includes shapefiles for the three periods of analysis:

SA_200910_CS	Current food security outcomes for October 2009
SA_200910_ML1	Most likely food security outcomes for October 2009 – December 2009
SA_200910_ML2	Most likely food security outcomes for January 2010 – March 2010

Within the shapefiles, the CS/ML1/ML2 fields contain the FNFIS area phase classification for the outlook period. The FNFIS_Legend.lyr file is provided for reference. It contains the official FNFIS color scheme.
