

This folder contains the shapefiles for the April 2011 Southern Africa FEWS NET Food Security Outlook. The classification scale used is the [Integrated Phase Classification \(IPC\) V2.0 scale](#). The folder includes three shapefiles, representing the three periods of analysis:

|               |   |
|---------------|---|
| SA_201104_CS  | Current food security outcomes for April 2011                     |
| SA_201104_ML1 | Most likely food security outcomes for April 2011 – June 2011     |
| SA_201104_ML2 | Most likely food security outcomes for July 2012 – September 2012 |

Within the shapefiles, the CS/ML1/ML2 fields contain the IPC area phase classification for the outlook period. FEWS NET began implementing the IPC humanitarian assistance mapping protocol (!) in April 2012. Thus, humanitarian assistance is not included in this data but was considered during analysis. The IPC\_Legend.lyr file is provided for reference. It contains the official IPC color scheme.
